Employee time tracking app

Check in and out on the phone — with location, photo and biometrics. Shift schedules, approvals, timesheets. 1C integration — if you need it

worktime.kz · info@worktime.kz

Three steps and tracking works

1

The employee installs the app

Android or the web version for iPhone. Sign-up with phone or e-mail, a request to the company or an invite link. IIN — if the company uses 1C

2

The manager sets it up

Approves the request, sets work locations, the schedule, lunch and allowed lateness, picks the check-in mode

3

The employee checks in

Within their locations' radius — with a photo or biometrics. Time comes from the server; the manager sees check-ins at once

No terminals or hardware: the app is on the employee's phone, the workspace is in the browser

App check-in: location, photo, biometrics

Location

Check-in only within your work locations' radius — one or several

Location + photo

A front-camera selfie at check-in

Location + biometrics

Fingerprint or Face ID on the phone

All together

The strictest mode: radius, selfie and biometrics

Spoofed location is rejected

No "Check in" button outside the location radius

The manager sees the evidence

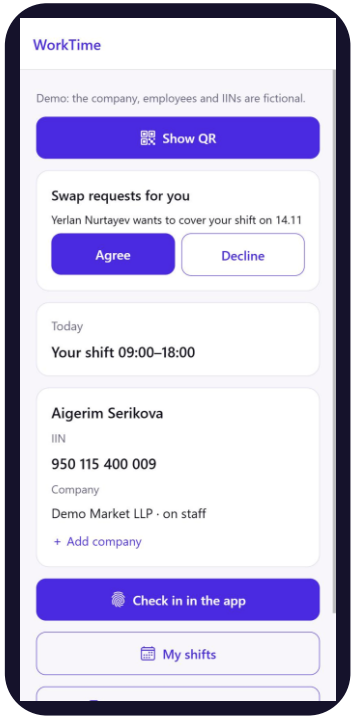

Photo, distance to the location, GPS accuracy and biometrics

Timesheet — in Excel or 1C

Monthly XLSX export; with 1C — loading into the timesheet

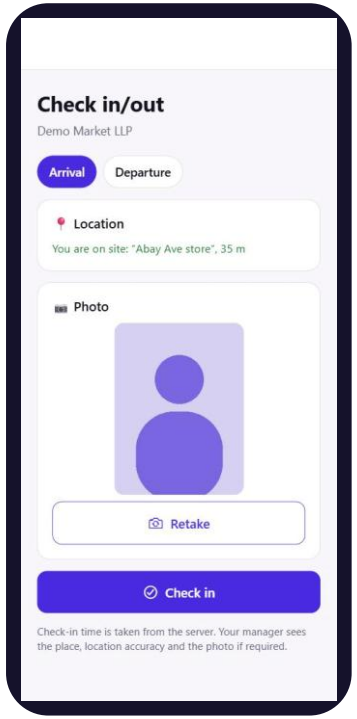

The manager turns the mode on in the workspace — for companies with or without 1C. No extra charge on any plan.

The employee app

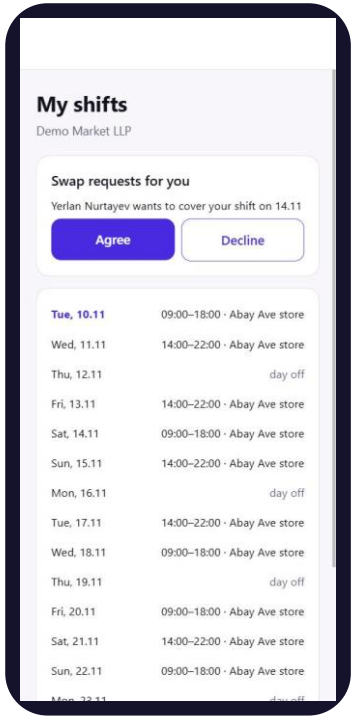

Home screen

Today's shift, colleagues' swap requests and the QR code for the 1C till

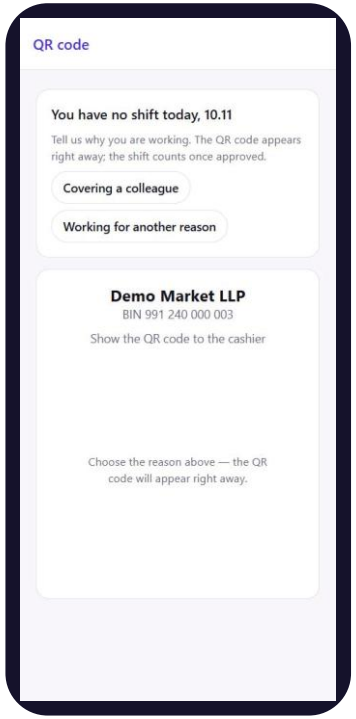

"Check in"

Arrival or departure, location check and camera photo

"My shifts"

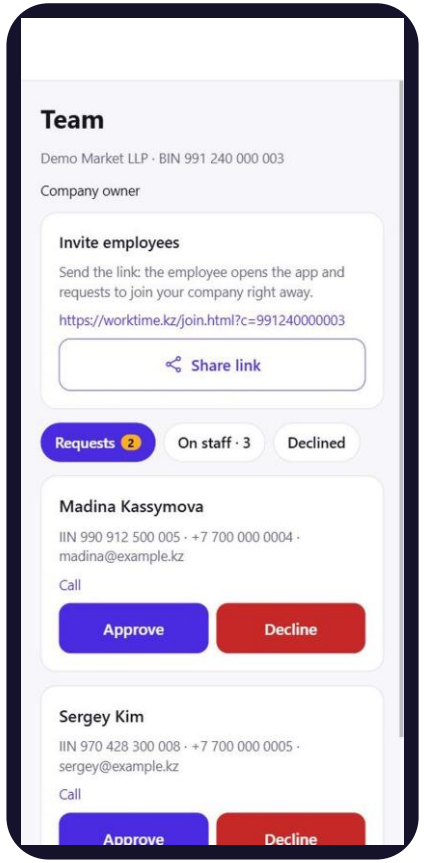

Two weeks of shifts by location and days off

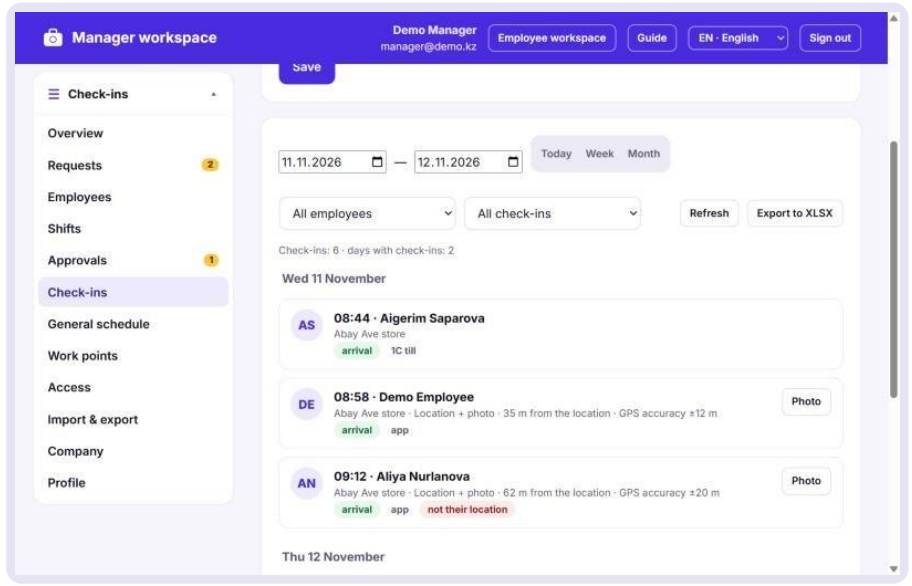

Off-schedule shift

A reason or covering a colleague — the shift awaits approval

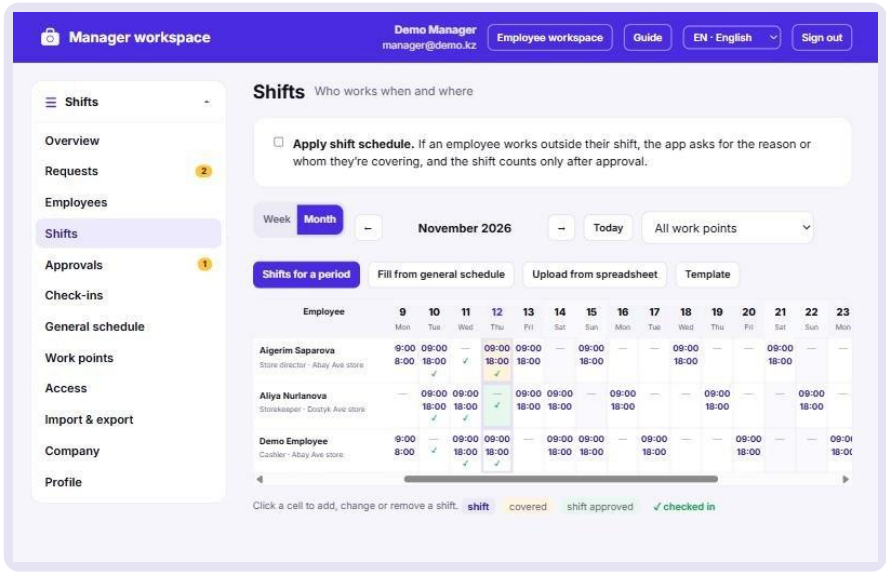

The manager — on the phone and in the workspace

Requests and approvals right on the phone

“Check-ins” for any period: who checked in, when and where — with photo, distance to the location and GPS accuracy

“Shifts”: a week or month by employee, “one on, N off” patterns, the general schedule or Excel

The web workspace is in Russian, Kazakh and English and installs on a computer as an app

Shifts, approvals and swaps

1

Shift schedule

The manager or store director sets shifts by hand, from the general schedule or Excel, or for a whole month by a “one on, N off” pattern

2

Off-schedule shift

The app asks for a reason or whom the employee is covering

3

Approval

The manager decides in the app, workspace or Telegram; a swap is confirmed by the colleague

4

Timesheet

Monthly check-ins — to Excel; with 1C — into your records without manual copying

Covering a colleague is not an absence: the shift counts for whoever worked it, and the manager is notified

Every manager has their own scope

Company manager	Full access: staff, schedule, locations, access, data	**whole company**
Store director	Requests, staff, shifts and approvals of their store	**own store**
Department head	The same for their department's staff	**own department**
IT support	Work locations, data import and export, viewing staff	**technical side**

Fits your structure

- Your own access sets for positions
- Permissions are checked on the server, not just on screen
- Change the company manager in two clicks
- Workspaces in Russian, Kazakh and English

The workspace installs on a computer as an app — no app store needed.

1C integration — when you need it

QR code at the till

The cashier scans the employee’s QR code at the 1C:Retail till — a scanner that reads QR is needed

“Daily Report”

Check-ins go into the store document, which builds the timesheet in 1C

Payroll, Trade, Accounting

Pilot: loading time into the Payroll timesheet and a check-in workstation — connected with the first customers

Everything works without 1C: app check-ins, the manager workspace, timesheet export to Excel. The 1C extension installs into your database on your licences; standard updates install as usual.

Pricing

The app — by headcount

App and workspaces, monthly price per company

up to 5 employees	**free**
up to 15 employees	**4 900 ₸**
up to 30 employees	**8 900 ₸**
up to 60 employees	**14 900 ₸**
up to 100 employees	**22 900 ₸**
over 100 employees	**230 ₸ per person**

With 1C integration — per database

Unlimited employees · each additional database 14 900 ₸/mo

1 month	**24 900 ₸**	
3 months	**67 200 ₸**	**–10%**
6 months · popular	**127 000 ₸**	**–15%**
12 months	**239 000 ₸**	**–20%**

Discount for 3 / 6 / 12 months — 10% / 15% / 20%. QR check-in and app check-in with location, photo and biometrics — on every plan.

10 days free — Demo access to all time tracking

No hardware — The app is on employees' phones, the workspace is in the browser

All check-in modes and new features — no extra charge on any plan.

Try it free for 10 days

1

Request

On worktime.kz or to info@worktime.kz

2

Setup

Workspace and app — in one day

3

10 days of use

Employees check in with the app

4

Decision

Pick a plan if you like it
